About

Full stack developer with a strong foundation in web technologies, Python, and development tools such as Git. Currently, in the final phase of a Computer Science degree, working on personal projects alongside my studies, showcased in my online portfolio. While primarily focused on full stack development, I also have a strong interest in DevOps, system administration, and networking. I'm a fast learner and work well independently, but I'm also comfortable in collaborative environments. Seeking opportunities to grow professionally by contributing clean, maintainable, and scalable code.

Experience

Independent Twitch Clients

Freelance Full Stack Developer

Jun 2021 - Present

Created interactive apps, games, and custom components for various Twitch streamers to enhance their streams. These projects included real-time widgets, mini-games, and subathon timers using technologies like TypeScript, Node.js, and the Twitch API. Collaborated with well-known streamers such as Alexelcapo, Abby, and Natsumii, delivering customized solutions tailored to their content style and audience preferences.

KairosBCN

Freelance Full Stack Developer

Aug 2024 - Present

Designed, developed, and deployed a modern website using Astro and Strapi for KairosBCN, a Pilates studio. Strapi was selected to facilitate easy content management for the client, and the frontend was built from the ground up. The scheduling feature, in particular, stands out due to a custom-built SVG-based schedule generator. I deployed the project on a VPS that I personally configured and have maintained continuously since then.

Private Tutoring

Coding Tutor

May 2022 - Present

Provided one-on-one programming tutoring to high school students, covering the fundamentals of programming logic, algorithms, and data structures. Lessons were customized to align with the student's skill level and emphasized practical understanding through interactive problem-solving. A couple of students later participated in hackathons, with some reaching finalist positions or earning awards.

Education

Universitat Politècnica de Catalunya

Degree in Computer Engineering - Computer Science

Currently Studying

Escola Virolai

Upper Secondary Education - Science and Technology

Jun 2020

Skills

- HTML

CSS

JavaScript

TypeScript

React

Next.js

Astro

Tailwind CSS

Node.js

Git

MongoDB
